Education

Temple University – College of Science & Technology

Bachelor of Science

Majors: Computer Science, Data Science

Philadelphia, PA

Gradation: May 2025

GPA: 3.52

Relevant Courses

Calculus I, II & III, Linear Algebra, Discrete Mathematics I & II, Probability Theory I & II, Mathematical Statistics, Program Design & Abstraction, Programming in Python, Low-Level Programming, Data Structures I & II, Operating System, Machine Learning, Data Science Principles, Database Systems, Cloud Computing, Software Design, Projects in Computer Science, and Projects in Data Science

Relevant Experiences

The Welcoming Center

IT Intern

Philadelphia, PA

May 2024 – Aug 2024

- Retrieved and managed 100+ survey data records and 400+ collector data records from Survey Monkey using Python in Zapier Action, transferring them to Salesforce for further processing
- Created and structured objects/tables in Salesforce to store and organize survey and collector data, ensuring smooth integration between Survey Monkey and Salesforce through API connections
- Developed and tested SOQL scripts and APEX code of trigger handlers to enhance data integration for the ESOL project, maintaining consistent data management across all Salesforce systems

Philadelphia Chinatown Development Corporation

Database Intern

Philadelphia, PA

Jan 2024 – Apr 2024

- Collaborated with the Volunteer Income Tax Assistance (VITA) team during the ongoing tax season by responding to admin inquiries and analyzing database issues to support tax filing operations
- Debugged and optimized automation workflows in Airtable based on team feedback, resolving errors and refining trigger conditions to ensure smooth data processing throughout the tax filing process
- Refined database structure and UI design according to the VITA team's suggestions, streamlining the client information verification process and workflow, and improving the tax preparation efficiency

Philadelphia Chinatown Development Corporation

Database Assistant Intern

Philadelphia, PA

Jun 2023 – Aug 2023

- Managed and organized Volunteer Income Tax Assistance (VITA) databases using Airtable by designing relational schemas, configuring automation workflows, and maintaining data integrity
- Established relationships between tables by linking primary and foreign keys, and improved the efficiency of the tax report process through methods such as sorting, filtering, and data matching
- Enhanced client experience by designing a friendly UI for the request forms, and advanced the security of the tax report process for 600+ clients through triggers with specific condition filters

Relevant Projects

Chrome Extension

Smart MathCalc

Philadelphia, PA

Jul 2025 – Oct 2025

- Developed a Chrome extension using JavaScript and Chrome APIs to detect mathematical content on webpages through regex pattern matching, automatically displaying a floating calculator interface

- Integrated WolframAlpha API for computational capabilities spanning basic arithmetic, algebra, calculus, and linear algebra with natural language query processing support and error handling
- Implemented draggable UI with 50+ mathematical function buttons, smart operation detection for contextual input assistance, and optimized DOM monitoring through debounced MutationObserver

Kaggle Competition

Philadelphia, PA

Lux AI

Jan 2025 – May 2025

- Developed a reinforcement learning agent for the Lux AI Season 3 competition using PPO, handling resource management and unit control under partial observability with custom observation masking
- Implemented custom reward shaping and observation processing to address training instability from early-iteration data, tuning hyperparameters, and adjusting policies to improve agent performance
- Deployed and trained the agent on cloud virtual machine using JAX and Flax for parallel environment simulation, running training over multiple weeks across thousands of episodes to optimize decisions

Web Application

Philadelphia, PA

Grind Daily

Oct 2024 – Dec 2024

- Leveraged MongoDB to construct a relational schema that streamlined data storage and retrieval, enhancing system scalability, efficiency, and adaptability for user operations across various contexts
- Engineered the “Forgot Password” feature using EmailJS in JavaScript to securely automate email verification and password reset processes, ensuring account security and safeguarding user privacy
- Implemented the “Friend” feature backend using Node.js to handle friend list queries, manage accept and decline request workflows, process real-time interactions, and maintain friend relationship data

Machine Learning Model

Philadelphia, PA

Natural Language Processing for Disaster Tweet

Jan 2024 – May 2024

- Developed a machine learning model to categorize tweets as disaster-related or not, enhancing the efficiency of identifying critical information during emergencies and speeding up response times
- Utilized Term Frequency-Inverse Document Frequency (TF-IDF) to preprocess and normalize the text data, enabling the model to accurately interpret and analyze the content for better performance
- Applied k-NN, Logistic Regression, and k-means algorithms to evaluate the model’s performance, providing the model with more accuracy and adaptability to various types of data and situations

Skills

Programming: Python, Java, C, C#, SQL, HTML, CSS, JavaScript

Languages: Chinese – Native, English – Native

Activities

Temple Association for Computing Machinery (ACM)

Philadelphia, PA

Participant

Jan 2024 – May 2024

- Participated in LeetCode practice sessions to strengthen problem-solving skills, engaged in resume reviews with peers, and conducted mock interviews to develop technical communication abilities

Temple OwlHacks

Philadelphia, PA

Participant

Oct 2024 – Oct 2024

- Developed WeCare, a mental health support web application using React, Node.js, and MongoDB to provide accessible counseling resources and crisis intervention tools for Pennsylvania residents
