Education

Temple University – College of Science & Technology

Bachelor of Science,

Majors: Computer Science, Data Science

Philadelphia, PA

Gradation: May 2025

GPA: 3.52

Relevant Courses

Mathematical Patterns, Calculus I, II & III, Linear Algebra, Discrete Mathematics I & II, Probability Theory I & II, Mathematical Statistics, General Physics I & II, Program Design & Abstraction in Java, Programming in Python, Low-Level Programming, Data Structures I & II, Operating System, Machine Learning, Principles of Data Science, Digital Forensics, Database Systems, Data-Intensive and Cloud Computing, Software Design, Projects in Computer Science, and Projects in Data Science

Relevant Experiences

The Welcoming Center

Philadelphia, PA

IT Intern

May 2024 – Aug 2024

- Retrieved and managed 100+ survey data records and 400+ collector data records from Survey Monkey using Python in Zapier Action, transferring them to Salesforce for further processing
- Created and structured objects/tables in Salesforce to store and organize survey and collector data, ensuring smooth integration between Survey Monkey and Salesforce through API connections
- Developed and tested SOQL scripts and APEX code of trigger handlers to enhance data integration for the ESOL project, maintaining consistent data management across all Salesforce systems

Philadelphia Chinatown Development Corporation

Philadelphia, PA

Database Assistant Intern

Jun 2023 – Aug 2023

- Managed and organized Volunteer Income Tax Assistance (VITA) databases by using Airtable
- Established relationships between tables by linking primary and foreign keys, and improved the efficiency of the tax report process through methods such as sorting, filtering, and data matching
- Enhanced client experience by designing a friendly UI for the request forms, and advanced the security of the tax report process for 600+ clients through triggers with specific condition filters

Relevant Project

Website

Philadelphia, PA

Grind Daily

Oct 2024 – Dec 2024

- Leveraged MongoDB to construct a relational schema that streamlined data storage and retrieval, enhancing system scalability, efficiency, and adaptability for user operations across various contexts
- Engineered the "Forgot Password" feature using EmailJS in JavaScript to securely automate email verification and password reset processes, ensuring account security and safeguarding user privacy
- Optimized the back-end architecture for the "Friend" feature, enabling friend list displays, seamless request workflows, robust decline handling, and smoother interactions, enhancing the user experience

Skills

Programming Languages: Python, Java, C, SQL, HTML, CSS, JavaScript

Technical Proficiencies: Computer Assembly, Data Analytics, Virtual Machine

Software: Zapier, Salesforce, Airtable, Microsoft Excel, Adobe Premiere Pro

Languages: Chinese – Native Proficiency, English – Professional Proficiency

Certifications: Google Analytics Certification, Technical Support Fundamentals
